DETAILED ACTION

Response to Amendment

This Office Action is in response to Applicant's amendment filed on June 27, 2003. Claims 1-47 are presented for further examination.

Election/Restrictions

1. Restriction to one of the following inventions is required 35 U.S.C. 121.
 - I. Claims 1-7, 8-11, 12-29, and 30-38, drawn to a context management system comprising a server appliance, comprising a computer system and at least one memory in which is stored a set of instructions, classified in class 709, subclass 204.
 - II. Claims 39-47, drawn to a method for context management comprising exchanging context data over a network, between a context management server coupled to the network and a plurality of applications installed on corresponding plurality of computers, classified in class 709, subclass 104.
2. The inventions are distinct, each from one another because the following reasons: Inventions I and II are related as subcombinations disclosed as usable together in single combination. The subcombinations are distinct from each if they shown to be separately usable. In the instant case, invention I has a separate utility such as a method where context data is exchanged over a network, between a context management server coupled to a plurality of applications installed on a corresponding plurality of computers (as set forth in invention II). See MPEP § 806.05(d).

Art Unit: 2157

Applicant is advised that the reply to this requirement to be complete must include an election of the invention to be examined even though the requirement may be traversed (37 CFR 1.143).

Response to Arguments

The Office notes the following arguments:

- a. Hayes does not disclose or suggest a context management system comprising a server appliance.
- b. Hayes does not disclose or suggest an implementation, which employs a server appliance.
- c. Hayes does not disclose or suggest a context management system comprising a web server, accessible through a network via a protocol.
- d. Hayes simply does not disclose or suggest an implementation, which comprises a web server that sends and receives communication via the HTTP protocol, as recited in claim 8. Therefore, Hayes does not disclose or suggest the context management system recited in claim 8.
- e. Hayes does not disclose or suggest a server appliance. Thus, Hayes does not disclose or suggest receiving first network message on server appliance, as recited in claim 12.
- f. Hayes does not disclose or suggest a context management system comprising a server appliance, as recited in claim 30.
- g. Hayes does not disclose or suggest a method for context management comprising, inter alia, exchanging context data, comprising a data item usable by first and second applications, the data item having a set of values comprising a first value corresponding to the first application and a second value corresponding to the second application, wherein the value of the data item corresponding to the first application is exchanged for the value of the data item corresponding

Art Unit: 2157

to the second application to retain context. Hayes does not disclose or suggest exchanging data retain to a context.

h. Hayes does not disclose or suggest retaining a context upon switching from one application to another, but rather changing context within a single application. Therefore, Hayes does not disclose or suggest the method for context management recited in claim 39.

i. Hayes does not or suggest exchanging context data, comprising a data item usable by first and second applications, the data item having a set of values comprising a first value corresponding to the first application and a second value corresponding to the second application, wherein the value of the data item corresponding to the first application is exchanged for the value of the data item corresponding to second application to retain the context. As a result, Hayes does not disclose or suggest the context management system recited in claim 42.

In response to (a)-(i), Applicant's argument are subjected to restriction requirements and non-statutory subject matter.
